1. Introduction

All of the criteria listed below must be met in order for target(s) to be recognized by the Science Based Targets initiative (SBTi). In addition, companies must follow the [GHG Protocol Corporate Standard, Scope 2 Guidance](#), and [Corporate Value Chain \(Scope 3\) Accounting and Reporting Standard](#). SBTi recommendations are important for transparency and best practice, but are not required. These criteria apply only to companies that are not classified as financial institutions. Financial institutions can set targets using the SBTi [criteria and guidance](#) for financial institutions.

The [Target Validation Protocol](#) describes the underlying principles, process, and criteria followed to assess targets and to determine conformance with the SBTi Criteria. The SBTi strongly recommends that companies review Table 7 in the Target Validation Protocol before commencing target development.

While every effort is made to keep companies informed of the latest criteria and recommendations, the initiative reserves the right to make adjustments as needed to reflect the most recent emissions scenarios, partner organization policies, and greenhouse gas accounting practices.

The initiative also reserves the right to withdraw the validation of an approved target if it becomes apparent that incorrect information was communicated during the target validation process that results in any of the criteria existing during the assessment not being met, or if requirements following the approval of the target are not respected (i.e. target progress reporting and recalculations).

Unless otherwise noted (including specific sections), all criteria apply to scopes 1, 2, and 3.

2. Effective Dates of Updated Criteria

This criteria version 4.2 reflects minor updates in criteria wording for purposes of clarity, and therefore will be effective immediately, as there have been no new criteria, nor changes to existing criteria content or expectations.

I. GHG Emissions Inventory and Target Boundary

Criteria

C1 — Scopes: The targets must cover company—wide scope 1 and scope 2 emissions, as defined by the GHG Protocol Corporate Standard.

C2 — Significance thresholds: Companies may exclude up to 5% of scope 1 and scope 2 emissions combined in the boundary of the inventory and target.¹

C3 — Greenhouse gases: The targets must cover all relevant GHGs as required per the GHG Protocol Corporate Standard.

C4 — Bioenergy accounting: Direct CO₂ emissions from the combustion of biofuels and/or biomass feedstocks, as well as sequestered carbon associated with such types of bioenergy feedstock,² must be included alongside the company’s inventory and must be included in the target boundary when setting a science-based target and when reporting progress against that target. If biogenic carbon emissions from biofuels and/or biomass feedstocks are accounted for as neutral, the company must provide justification of the underlying assumptions. Companies must report emissions from N₂O and CH₄ from bioenergy use under scope 1, 2, or 3, as required by the GHG Protocol, and must apply the same requirements on inventory inclusion and target boundary as for biogenic carbon. Companies are expected to adhere to any additional GHG Protocol Guidance on this topic when released in order to maintain compliance with this criterion.

C5 — Subsidiaries: It is recommended that companies submit targets only at the parent- or group-level, not the subsidiary level. Parent companies must include the emissions of all subsidiaries in their target submission, in accordance with boundary criteria above. In cases where both parent companies and subsidiaries submit targets³, the parent company’s target must also include the emissions of the subsidiary

¹ Where a company’s scope 1 or 2 emissions are deemed immaterial (i.e. under 5% of total combined scope 1 and 2 emissions), companies may set their SBT solely on the scope (either scope 1 or scope 2) that covers more than 95% of the total scope 1 and 2 emissions. The company must continue to report on both scopes and adjust their targets as needed, in accordance with the GHG Protocol’s principle of completeness and as per C23 and R12.

² Non-bioenergy related biogenic emissions must be reported alongside the inventory and included in the target boundary. GHG removals that are not associated with bioenergy feedstock are currently not accepted to count as progress towards SBTs or to net emissions in the inventory.

³ This criterion applies only to subsidiaries. Brands, licensees, and/or specific regions or business divisions of a company will not be accepted as separate targets unless they fall outside of a parent company’s chosen consolidation approach.

if it falls within the parent company’s emissions boundary given the chosen inventory consolidation approach.

Recommendations and additional guidance

R1 — Direct land use change emissions: When relevant, companies are encouraged to account for direct land use change emissions and include them in their target boundary. Companies seeking to implement mitigation actions aimed at reducing land use change as part of their SBTs (e.g. through preventing deforestation from their supply chains) should include land use change emissions in their base-year inventory. Since methods to calculate land use change can differ widely, and there is currently no standardized method recognized under the GHG Protocol, companies should disclose the method used to calculate these impacts in their GHG inventory. Companies with indirect land use emissions can report these separately alongside the company’s inventory and similarly disclose the method used to calculate these impacts.

R2 — Bioenergy accounting: Assumptions of neutrality for bioenergy tend to overlook that there is a significant time-lag between the bio-based resource removal (wood/crop) and later regeneration. They also overlook possible differences in productivity among forest/crop systems used as bioenergy feedstock and the effects of long-term carbon storage in bio-based products and/or disposal. For these reasons, until a standardized method for bioenergy GHG accounting is developed under the GHG Protocol, the SBTi strongly recommends companies take into account the time of emissions (i.e. wood/crop removal) and sequestration (i.e. forest/crop regrowth) in their accounting methodologies.

II. Timeframe

Criteria

C6 — Base and target years: Targets must cover a minimum of 5 years and a maximum of 15 years from the date the target is submitted to the SBTi for an official validation.⁴

C7 — Progress to date: Targets that have already been achieved by the date they are submitted to the SBTi are not acceptable. The SBTi uses the year the target is submitted to the initiative (or the most recent completed GHG inventory) to assess forward-looking ambition. The most recent completed GHG inventory must not be earlier than two years prior to the year of submission.⁵

Recommendations and additional guidance

R3 — Base year: The SBTi recommends choosing the most recent year for which data are available as the target base year.

R4 — Target year: Targets that cover more than 15 years from the date of submission are considered long-term targets. Companies are encouraged to develop such long-term targets up to 2050 in addition to mid-term targets required by C6. At a minimum, long-term targets must be consistent with the level of decarbonization required to keep global temperature increase to well-below 2°C compared to pre-industrial temperatures to be validated and recognized by the SBTi.

R5 — Consistency: It is recommended that companies use the same base and target years for all targets within the mid-term timeframe and all targets within the long-term timeframe.

⁴ For targets submitted for an official validation in the first half of 2021, the valid target years are 2025-2035 inclusive. For targets submitted in the second half of 2021, the valid target years are between 2026 and 2036 inclusive.

⁵ For targets submitted for an official validation in 2021, the most recent inventory data submitted must be for 2019 at the earliest.

III. Ambition

Criteria

C8 — Level of ambition: At a minimum, scope 1 and scope 2 targets must be consistent with the level of decarbonization required to keep global temperature increase to well-below 2°C compared to pre-industrial temperatures, though companies are encouraged to pursue greater efforts towards a 1.5°C trajectory. Both the target timeframe ambition (base year to target year) and the forward-looking ambition (most recent year to target year) must meet this ambition criteria.

C9 — Absolute vs. intensity: Intensity targets for scope 1 and scope 2 emissions are only eligible when they lead to absolute emission reduction targets in line with climate scenarios for keeping global warming to well-below 2°C or when they are modeled using an approved sector pathway applicable to companies' business activities.⁶ Absolute reductions must be at least as ambitious as the minimum of the range of emissions scenarios consistent with the well-below 2°C goal, or aligned with the relevant sector reduction pathway within the Sectoral Decarbonization Approach (SDA).

C10 — Method validity: Targets must be modeled using the latest version of methods and tools approved by the initiative. Targets modelled using previous versions of the tools or methods can only be submitted to the SBTi for an official validation within 6 months of the publication of the revised method or the publication of relevant sector-specific tools.

C11 — Combined scope targets: Targets that combine scopes (e.g. 1+2 or 1+2+3) are permitted. When submitting combined targets, the scope 1+2 portion must be in line with at least a well-below 2°C scenario and the scope 3 portion of the target must meet the ambition requirements outlined in C20. For sectors where minimum target ambition is specified for companies' scope 3 activities, C21 supersedes C11.

C12 — Offsets: The use of offsets must not be counted as emissions reduction toward the progress of companies' science-based targets. The SBTi requires companies set targets based on emission reductions through direct action within their own operations and/or their value chains. Offsets are only considered to be an option for companies wanting to finance additional emission reductions beyond their science-based targets.

C13 — Avoided emissions: Avoided emissions fall under a separate accounting system from corporate inventories and do not count toward science-based targets.

⁶For a list of all approved methods and sector pathways, please consult the [Corporate Manual](#)

Recommendations and additional guidance

R6 — Choosing an approach: The SBTi recommends using the most ambitious decarbonization scenarios that lead to the earliest reductions and the least cumulative emissions.

IV. Scope 2

Criteria

C14 — Approaches: Companies shall disclose whether they are using a location- or market-based approach as per the GHG Protocol Scope 2 Guidance to calculate base year emissions and to track performance against a science-based target. It is recommended that companies report scope 2 emissions in both approaches. However, a single and consistent approach shall be used for setting and tracking progress toward an SBT (e.g. using location-based approach for both target setting and progress tracking).

C15 — Renewable electricity: Targets to actively source renewable electricity at a rate that is consistent with 1.5°C scenarios are an acceptable alternative to scope 2 emission reduction targets. The SBTi has identified 80% renewable electricity procurement by 2025 and 100% by 2030 as thresholds (portion of renewable electricity over total electricity use) for this approach in line with the recommendations of RE100. Companies that already source electricity at or above these thresholds shall maintain or increase their use of renewable electricity to qualify.

Recommendations and additional guidance

R7 — Purchased heat and steam: For science-based target modeling purposes using the SDA, it is recommended that companies model purchased heat and steam related emissions as if they were part of their direct (i.e. scope 1) emissions.

R8 — Efficiency considerations for target modeling: If companies are using a method that does not already embed efficiency gains for the specific sector, market, and the decarbonization projected for the power sector based on well-below 2°C scenario, it is recommended that these factors be taken into account when modeling electricity-related scope 2 targets.

V. Scope 3

Criteria

C16 – Scope 3 screening: Companies must complete a scope 3 screening for all relevant scope 3 categories considering the minimum boundary⁷ of each category per the GHG Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard.

C17 – Requirement to have a scope 3 target: If a company's relevant scope 3 emissions are 40% or more of total scope 1, 2, and 3 emissions, a scope 3 target is required. All companies involved in the sale or distribution of natural gas and/or other fossil fuel products shall set scope 3 targets for the use of sold products, irrespective of the share of these emissions compared to the total scope 1, 2, and 3 emissions of the company.

C18 – Boundary: Companies must set one or more emission reduction targets and/or supplier or customer engagement targets that collectively cover(s) at least 2/3 of total scope 3 emissions considering the minimum boundary of each category in conformance with the GHG Protocol Corporate Value Chain (Scope 3) Accounting and Reporting Standard.

C19 – Timeframe: Emission reduction targets must cover a minimum of 5 years and a maximum of 15 years from the date the company's target is submitted to the SBTi for an official validation. Companies are encouraged to develop such long-term targets up to 2050 in addition to the mid-term targets as required by C19. Long-term scope 3 targets must comply with C20 to be considered ambitious.

C20 – Level of ambition for scope 3 emissions reductions targets: Emission reduction targets (covering the entire value chain or individual scope 3 categories) are considered ambitious if they fulfill any of the following:

- Absolute: Absolute emission reduction targets that are consistent with the level of decarbonization required to keep global temperature increase to 2°C compared to pre-industrial temperatures. Absolute targets can be expressed in intensity terms based on units that are consistent and representative of companies' activities.
- Economic intensity: Economic intensity targets that result in at least 7% year-on-year reduction of emissions per unit value added.⁸

⁷ For a definition of the minimum boundaries of scope 3 categories and emissions sources that fall outside the minimum boundaries, see Table 5.4 (page 35) of the Corporate Value Chain (Scope 3) Accounting and Reporting Standard.

⁸ Per the Greenhouse gas emissions per unit of value added (GEVA) method as outlined in the [Corporate Manual](#).

- **Physical intensity:** Intensity reductions aligned with the relevant sector reduction pathway within the SDA; or targets that do not result in absolute emissions growth and lead to linear annual intensity improvements equivalent to 2%, at a minimum.

C20.1 – Supplier or customer engagement targets: Company targets to drive the adoption of science-based emission reduction targets by their suppliers and/or customers are considered acceptable when the following conditions are met:

- **Boundary:** Companies may set engagement targets around relevant and credible upstream or downstream categories.
- **Formulation:** Companies shall provide information in the target language on what percentage of emissions from relevant upstream and/or downstream categories is covered by the engagement target or, if that information is not available, what percentage of annual procurement spend is covered by the target.⁹
- **Timeframe:** Companies’ engagement targets must be fulfilled within a maximum of 5 years from the date the company’s target is submitted to the SBTi for an official validation.¹⁰
- **Level of ambition:** The company’s suppliers/customers shall have science-based emission reduction targets in line with SBTi resources.

C20.2 – Fossil fuel sale, transmission and distribution: Companies that sell, transmit, or distribute natural gas or other fossil fuel products shall set emission reduction scope 3 targets for the “Use of sold products” category that are at a minimum consistent with the level of decarbonization required to keep global temperature increase well-below 2°C compared to pre-industrial temperatures. Customer engagement targets as described in C20.1 are not applicable for this criterion.

Recommendations and additional guidance

R9 – Supplier engagement: Companies should recommend that their suppliers use the SBTi guidance and tools available to set science-based targets. SBTi validation of supplier science-based targets is recommended but not required.

R10 – Targets covering optional scope 3 emissions: Targets to reduce scope 3 emissions that fall outside the minimum boundary¹¹ of scope 3 categories are not required, but are encouraged when these emissions are significant. This can include targets to influence the behavior of end-users (e.g. education campaigns) or to drive the adoption of science-based targets on customers (e.g. customer engagement targets). Companies may cover these emissions with a scope 3 target, but such targets cannot count

⁹ If measuring coverage by spend, the company should provide an estimate of the emissions coverage associated with that spend for validation purposes to demonstrate that criterion C18 has been met, by the supplier or customer target alone or together with other scope 3 target(s).

¹⁰ For targets submitted for an official validation in the first half of 2021, the valid target years are up to 2025 inclusive. For those submitted in the second half of 2021, valid target years are up to 2026 inclusive.

¹¹ For a definition of the minimum boundaries of scope 3 categories and emissions sources that fall outside the minimum boundaries, see Table 5.4 (page 35) of the Corporate Value Chain (Scope 3) Accounting and Reporting Standard.

towards the $\frac{2}{3}$ threshold defined in C18 for scope 3 emissions (i.e., these targets are above and beyond the company's scope 3 targets). For reference, consult page 48 in the GHG Protocol Scope 3 Standard for a list of products that generate direct and indirect use-phase emissions.

VI. Sector-specific guidance

C21 — Requirements from sector-specific guidance: Companies must follow requirements for target setting and minimum ambition levels as indicated in relevant sector-specific methods and guidance at the latest, 6 months after the sector guidance publication. A list of the sector-specific guidance and requirements is available below, in the [Target Validation Protocol](#), and the [Corporate Manual](#).

VII. Reporting

Criteria

C22 — Frequency: The company shall publicly report its company-wide GHG emissions inventory and progress against published targets on an annual basis.

Recommendation and additional guidance

R11 — Where to disclose: There are no specific requirements regarding where the inventory should be disclosed, as long as it is publicly available. Recommendations include annual reports, sustainability reports, the company's website, and/or CDP's annual questionnaire.

VIII. Recalculation and Target Validity

Criteria

C23 — Mandatory target recalculation: To ensure consistency with the most recent climate science and best practices, targets must be reviewed, and if necessary, recalculated and revalidated, at a minimum every 5 years. For companies with targets approved in 2020 or earlier, the latest year targets must be revalidated is 2025. Companies with an approved target that requires recalculation must follow the most recent applicable criteria at the time of resubmission.

C24 — Target validity: Companies with approved targets must announce their target publicly on the SBTi website within 6 months of the approval date. Targets unannounced after 6 months must go through the approval process again, unless a different publication time frame has been agreed with the SBTi.

Recommendation and additional guidance

R12 — Triggered target recalculation: Targets should be recalculated, as needed, to reflect significant changes that could compromise relevance and consistency of the existing target. The following changes should trigger a target recalculation:

- Scope 3 emissions become 40% or more of aggregated scope 1, 2 and 3 emissions;
- Emissions of exclusions in the inventory or target boundary change significantly;
- Significant changes in company structure and activities (e.g. acquisitions, divestitures, mergers, insourcing or outsourcing, shifts in goods or service offerings);
- Significant adjustments to the base year inventory or changes in data to set targets such as growth projections (e.g. discovery of significant errors or a number of cumulative errors that are collectively significant);
- Other significant changes to projections/assumptions used in setting the science-based targets.

R13 — Validity of target projections: The SBTi recommends that companies check the validity of target-related projections annually. The company should notify the SBTi of any significant changes and report these major changes publicly, as relevant.

3. Ambition Ranges for Target Classifications

The table below presents the ambition ranges used to classify scope 1 and/or scope 2 targets against three long-term temperature goals.

Long-term temperature goal	Ambition range (global emissions pathway)	Ambition range (sector emissions pathway)
<p>2°C</p> <p>Approx. 50% chance of limiting warming in 2100 to below 2°C</p> <p>No longer accepted in new target submissions as of October 2019.</p>	<p>$1.23\% \leq X < 2.5\%$</p> <p>annual linear reduction rate over target period</p>	<p>SDA 2DS pathway $\leq X <$ SDA B2DS pathway</p>
<p>Well below 2°C</p> <p>Approx. 66% chance of limiting peak warming between present and 2100 to below 2°C</p>	<p>$2.5\% \leq X < 4.2\%$</p> <p>annual linear reduction rate over target period</p>	<p>$X \geq$ SDA B2DS pathway</p>
<p>1.5°C</p> <p>Approx. 50% chance of limiting peak warming between present and 2100 to below 1.5°C</p>	<p>$X \geq 4.2\%$</p> <p>annual linear reduction rate over target period</p>	<p>N/A</p> <p>$X \geq$ SDA1.5DS pathway for power generation</p>

4. Sector-Specific Requirements

Sector-specific guidance and methods are currently available for many sectors. All new, sector-specific guidance that becomes available will be uploaded to the sector development page on the SBTi website. The SBTi has sector-specific requirements related to the use of target-setting methodologies and minimum ambition levels.

Sector	Scope 1 and 2	Scope 3	Guidance/Notes
Power Generation	<p>The Sectoral Decarbonization Approach (SDA) power generation pathway defines the minimum forward-looking ambition the company must use to set targets.</p> <p>The timeframe and forward-looking ambition must be, at a minimum, aligned with the well-below 2°C pathway.</p> <p>Companies operating in the power sector must adhere to the guidance for electric utilities</p>	Ambition must be in line with C20	Beginning in January 2021 in line with the latest guidance for electric utilities, companies submitting targets in this sector with scope 3 emissions that represent 40% or more of overall emissions will be required to include an emissions reduction target covering all sold electricity (including purchased and resold electricity in scope 3 category 3), in addition to a target covering power generation in scope 1, for new target submissions. This target must use the SDA pathway and must be, at a minimum, aligned with a well- below 2°C pathway.
Original Equipment Manufacturers (OEMs)/ Automakers	Sufficient ambition if in line with the SDA Transport Tool for passenger light-duty vehicle (PLDV) manufacturers or absolute contraction approach.	Targets covering ‘use of sold products’ must meet the minimum level of ambition determined by the SDA Transport tool, covering Well-to-Wheel (WTW) emissions of sold vehicles, and aligned to the well-below 2°C pathway.	Tested vs Real emissions for OEMs original equipment manufacturers: Original equipment manufacturers must convert their base year emissions figures for the use-phase of their products into real emissions with the use of global standards (e.g., Worldwide Harmonized Light Vehicle Test Procedure - WLTP) when available. In the absence of a normalized test procedure for certain vehicle types, companies are invited to present and justify their own estimates/simulations based on fuel

			consumption-specific duty cycles to the SBTi.
Transport Services	Sufficient ambition if in line with the SDA Transport Tool or absolute contraction approach	Sufficient ambition if in line with the SDA Transport Tool or absolute contraction approach.	<p>Refer to the SBTi Transport guidance for a description of all transport sub-sectors covered by the SDA Transport tool and to learn about best practices in target-setting for transport activities.</p> <p>For companies in the aviation and maritime transport sectors, please consult the SBTi transport resources for further information on sector-specific transport methodologies.</p> <p>Well-to-wheel boundary: Companies setting targets for transport-related emissions should cover well-to-wheel emissions (WTW) in their target boundary to accurately capture emissions shifts between the tank-to-wheel (TTW) and the well-to-tank (WTT), for example, due to changes in power train technologies.</p>
Oil & Gas	<p>The SBTi is developing targets setting methods for oil & gas companies and cannot officially validate targets for this sector before the guidance is completed.</p> <p>While the project is underway, oil & gas companies are invited to commit to set SBTs by submitting a Commitment Letter.</p>	<p>The SBTi is developing targets setting methods for oil & gas companies and cannot officially validate targets for this sector before the guidance is completed.</p> <p>While the project is underway, oil & gas companies are invited to commit to set SBTs by submitting a Commitment Letter.</p>	<p>For the target validation by the SBTi, “Oil & Gas” includes, but is not limited to, integrated Oil & Gas companies, Integrated Gas companies, Exploration & Production Pure Players, Refining and Marketing Pure Players, Oil Products Distributors, Gas Distribution and Gas Retailers.</p> <p>The SBTi will assess companies on a case-by-case basis to determine whether companies will be classified as Oil & Gas companies for SBTi validation, and if so, reserve the right to not move forward with their validation until after the SBTi Oil & Gas sector development has been completed.</p>
Fossil Fuel Sale/Transmission/Distribution*	N/A – follow guidance for the primary sector.	In addition to guidance for the primary sector, scope 3 targets must be set on scope	Targets must be set for category 11, irrespective of the share of these emissions compared to the total S1+S2+S3 emissions

<p><i>*This information is only applicable to companies that receive less than 50% of their revenue from fossil fuel sale, transmission, or distribution. For companies that receive 50% or more of their revenue from these activities, please refer to the Oil & Gas section above.</i></p>		<p>3 category 11 “use of sold products” using absolute emissions contraction or intensity targets in line with absolute contraction, aligned with at least well-below 2°C ambition thresholds. In the future, a well-below 2°C SDA pathway may be made available.</p>	<p>of the company. Separate scope 3 targets may need to be set in this case.</p>
<p>Services/Commercial Buildings</p>	<p>Sufficient ambition if in line with the available SDA pathway or absolute contraction approach.</p>	<p>Ambition must be in line with C20.</p> <p>Inclusion of emissions from use of sold products for architecture/design firms</p>	<p>Real Estate Investment Trusts (REITs) wishing to set targets must specify if they are a mortgage-based REIT or equity-based REIT.</p> <p>Equity REITs must pursue the regular target validation route for companies.</p> <p>Mortgage REITs must instead utilize the Financial Institutions guidance for setting SBTs.</p>
<p>Industrial Sectors: Iron and Steel Cement Aluminum Pulp and Paper</p>	<p>Sufficient ambition if in line with the available SDA pathway or absolute contraction approach.</p>	<p>Ambition must be in line with C20.</p>	
<p>Financial Institutions</p>	<p>Sufficient ambition if in line with the Absolute contraction approach or relevant SDA pathways (e.g. Services/ Commercial buildings).</p>	<p>As of October 2020, the SBTi has developed the first version of criteria for financial institutions to align their investment and lending portfolios with Paris-aligned climate stabilization pathways, and financial institutions are now welcome to submit targets</p>	<p>The SBTi guidance for financial institutions outlines in detail the target setting requirements for setting both scope 1+2 and scope 3 targets for investment and lending activities.</p>

		for official validation based on this criteria.	
Information and communication technology providers	Sufficient ambition if in line with the Absolute contraction approach or if it meets the minimum requirements of the relevant ICT pathways.	Ambition must be in line with C20.	The SBTi guidance for ICT companies including mobile networks operators, fixed networks operators, and data centers operators outlines in detail the target setting requirements for setting scope 1+2 targets.
Chemical	Sufficient ambition if in line with the absolute contraction approach.	Ambition must be in line with C20.	The chemical sector pathway in the SDA tool cannot be used at present. SBTi has launched an ongoing scoping project to develop sector-specific methods, to guide chemical and petrochemical companies in setting ambitious targets and begin decarbonization. Companies that produce or sell fluoro gases (or products that use HFCs) must account for and report emissions during the use of these gases in cooling units/refrigerants or in industrial applications in their GHG inventory under scope 3 category 11 “use of sold products”. Companies must also account for and report HFC emissions associated with the disposal of products that use HFCs in scope 3 category 12 “end of life treatment of sold products”.
Apparel and footwear	Sufficient ambition if in line with the absolute contraction approach.	Ambition must be in line with C20.	Companies across the apparel and footwear value chain should consult the Apparel and Footwear sector SBT guidance for detailed guidance on target setting.
All other sectors	Sufficient ambition if in line with the absolute contraction approach.	Ambition must be in line with criteria C20.	

For the most up-to-date information on sector developments, please refer to the Sector Development page of the SBTi website.

5. Document History

Version	Change/update description	Date finalized	Effective Dates
1.0	Original version of Science Based Targets initiative Criteria and Recommendations	May 2015	May 2015 to April 16, 2017
2.0	Updated version of Criteria and Recommendations to reflect current best practice and latest experience.	February 24, 2017	From February 24, 2017
3.0	Updated version of Criteria and Recommendations to provide greater clarity and reflect current best practices.	May 23, 2018	From May 23, 2018
Guidance for 3.0	Supplementary guidance and clarifications to V3.0.	February 28, 2019	From May 23, 2018
4.0	Updated version of Criteria and Recommendations to reflect current developments of climate science and best practices. This version integrates clarifications to relevant criteria included in Guidance for 3.0.	April 17, 2019	From October 15, 2019
4.1	Updated version of Criteria and Recommendations to provide greater clarity and reflect current best practices.	April 15, 2020	From July 15, 2020
4.2	<p>Updated version of the Criteria and Recommendations that includes minor wording changes to improve clarity in C4, C16-18, C23, and R10. No changes or updates to criteria content have been made.</p> <p>Additionally, the section on annual timeline of updates was removed as it was out of date, and sections 3 and 4 have been added from other SBTi resources to provide the information directly in this criteria document.</p>	April 15, 2021	From April 15, 2021
